

# CCLI Template Tutorial

The following tutorial walks through how to correctly set the CCLI information template in ProPresenter 6.

1. Open CCLI settings: ProPresenter 6 > Preferences > General > CCLI Layout > Edit Template
2. Check Resolution: In the top right of the editor workspace view the current size of the template will be displayed. This resolution should match the output resolution of ProPresenter (most often 1280x720). If they aren't the same, it will scale your template up or down changing the look.
3. Set Textbox Settings

The correct settings should be:

- 20pt font in DIN MEDIUM, right justified
- Text box at the bottom right of the slide
- Text box should be stretched far enough left to accommodate as much text as possible without overlapping the sermon series graphic in the bottom left of the screen

Here is an example of how it should look:

- Check Final Product Here's what the final product should look like:
