

The Mr. Heater Little Buddy Heater reigns supreme as probably the greatest portable heaters for these on a funds. Clocking in at nicely below \$100, this budget propane heater is just not solely lightweight and compact, but it's also surprisingly highly effective and efficient (though it does have its limitations). Built-in safety features guarantee your safety, even in enclosed areas. Although the barely bigger and more highly effective Mr. Heater Portable Buddy is perhaps a better tent heater total, don't overlook the Little Buddy if need something just a little smaller and extra compact. Is the Mr. Heater Little Buddy Heater Best for you? I've all the time been a big fan of winter camping - but, boy, can it get chilly. A cold-weather sleeping bag and a 4-season tent keep me heat enough, however the extra heat from a portable tent heater is a blessing when the temperatures dip effectively beneath freezing. Although the Little Buddy from Mr. [alpha heater reviews](#) is far too bulky for backpacking, it's the right measurement for automotive camping.

I also use mine at dwelling while working in the barn and as an emergency heater for energy outages. As a lot as I like the Little Buddy Heater for its energy output and effectivity, it does have its drawbacks. Namely, it's actually not all that little. It additionally has only a single heat setting which somewhat limits its functionality. That stated, I still love the Little Buddy for heating up an unheated workspace, warming up my tent before mattress and after i get up in the morning, and especially across the campsite after i can't build a campfire. The Mr. Heater Little Buddy produces 3,800 BTUs per hour. It has a single heat setting (no heat adjustability) and runs for roughly 5.5 hours straight on a single 1-lb cylinder of propane. Mr. [alpha heater price](#) claims that the Little Buddy can efficiently heat a [quiet space heater](#) as much as about 95 square feet.

I've discovered that, although that is true, it doesn't really heat up a room as much because it provides a direct heat source. The Little Buddy is certainly a private heater. I've used the Little Buddy in a selection of different settings. Most often earlier than sleep and upon waking in my tent, in my unheated workspace, and working on initiatives outdoors. It's provided adequate direct heat, even in temperatures beneath freezing. It heats up my 2-particular person tent to a comfortable temperature in simply minutes. Mr. [alpha heater price](#) gives the Little Buddy an oxygen depletion sensor and an unintentional tip-over shutoff for improved security. There isn't any high-limit safety shutoff or even a built-in carbon monoxide detector like you find on many different winter tent heaters. Although I definitely recognize these security features, the unintentional tip-over shutoff is a bit too delicate. When utilizing the heater on an uneven surface (like the ground outdoors), the swap is vulnerable to routinely flip the heater off with the slightest jostling.

Interestingly, Mr. Heater simultaneously states that the Little Buddy is for outside use solely whereas additionally labeling it as a tent heater safe for small, enclosed spaces. Personally, I don't run the Little Buddy in the course of the night time. I do know a lot of people that do run the heater via the night in confined spaces (with correct ventilation and a separate carbon monoxide detector) with no problem. I prefer to solely run my propane tent heaters for shorter periods of time while awake however, then once more, I keep lots warm even on chilly winter nights in my 0° sleeping bag. The Mr. Heater Little Buddy clocks in at 5.Eighty five lbs (not together with the load of the 1-lb propane canister). Naturally, this is far too heavy for winter backpacking, but the burden is not any large deal for automobile camping, hunting, RVing, or [quiet space heater](#) anything else the place you'll be largely in the same place. Because of the identify (and my prior expertise with the barely larger Mr. Heater Portable Buddy), I expected the Little Buddy to be smaller.
